EDUCATION

College University

SaiGon University

June 2028

Current GPA: 3.22/4.0

COURSEWORK

Courses: TOEIC from AnhleEnglish

SKILLS

Languages: C/C++, Python, Java, JavaScript/TypeScript, HTML/CSS, L^AT_EX

Tools: Git/GitHub, VS Code, IntelliJ CLion/IDEA

PROJECTS

Waste Identification System | *Python, YOLOv8, OpenCV, Roboflow, PyInstaller*

Sept. 2025

- Developed an AI-powered application to classify solid waste (paper, electronics, etc.) using the **YOLOv8** model to support environmental protection.
- Processed and annotated datasets to improve model accuracy, achieving high precision in real-time object detection.
- Packaged the application into a standalone executable using **PyInstaller** for easier deployment on Windows environments.

Web Painting Gallery | *JavaScript, HTML/CSS, React, PHP/Node.js, SQL*

March 2025

- Designed and developed a full-stack e-commerce website for selling paintings with a focus on user experience and responsive design.
- Managed a team of 6 members to build a human resource management plan and technical documentation for the project.
- Implemented core features including product catalogs, shopping carts, and secure user authentication interfaces.

Mini Supermarket Management (SieuThiMini) | *Java, Swing, JDBC, MySQL, Maven*

2024

- Built a desktop Point-of-Sale (POS) application for managing inventory, sales, and employee records in a mini supermarket.
- Utilized **Java Swing** for the graphical user interface and **JDBC** for seamless database integration and persistent storage.
- Optimized data handling to ensure accurate reporting of daily revenue and stock levels.

EXPERIENCE

Competitive Programming Club | *Active Member*

Sept. 2023 – Present

- Participate in weekly training sessions focusing on **Data Structures and Algorithms** (DSA) to solve complex problems on platforms like Codeforces, LeetCode, and Hackerrank.
- Collaborate with team members to practice for competitive programming contests such as **ICPC** and other university-level coding competitions.
- Optimize code performance and time complexity using **C++** and **Python**, achieving efficient solutions for graph theory and dynamic programming challenges.
